EXECUTIVE SUMMARY

The Manitoba Aboriginal population is projected to grow by 59.5% over the 25 year projection period; from 120,600 in 1991 to 192,400 by 2016. This represents an average annual growth rate of 1.9% versus a projected rate of 0.3% for the non-Aboriginal population.

With the total Manitoba population projected to be 1,257,100 in 2016; Aboriginals, who comprised 10.8% of the population in 1991 are projected to increase their share of Manitoba's population to 15.3% by 2016.

Within the Aboriginal population, the 3 groups (Status Indian, Metis and Non-Status & Other Indians) are experiencing different demographic trends.

For the Status Indian (Registered Indian and Inuit) population, a high total fertility rate will result in a population continuing to be younger than the other 2 groups and other Manitobans as well. The 1991 population of 65,400 is projected to grow by 83.2% (an average annual growth rate of 2.5%), to reach 119,800 by 2016.

The Metis population, with a fertility rate between the Status Indian population and other Manitobans will grow at an average annual rate of 1.6%. An increase of 49.5% in the 1991 total of 40,200 will yield a projected Metis population of 60,100 in 2016.

The Non-Status and Other Indian population is projected to decrease from 15,000 in 1991 to 11,000 in 2002 before increasing to 12,500 by 2016. The reason for this decline is that 93% of the 8,800 persons projected to regain status under Bill C31 are coming from this group. The other 7% are coming from the Metis group.

As mentioned above, the Aboriginal population is projected to increase by 59.5% between 1991 and 2016. However, this increase is not projected to be uniform across the province. The On-Reserve population is projected to increase by 36.6%, the Winnipeg population by 69.4% while the Other Off-Reserve population is projected to increase by 70.3%.

For 1991, the geographic distribution of the Aboriginal population was 31.7% On-Reserve, 37.3% Winnipeg and 31.0% Other Off-Reserve. Projected figures for 2016 are 27.2% On-Reserve, 39.8% Winnipeg and 33.1% Other Off-Reserve. The geographic distribution for each of the 3 Aboriginal groups is discussed in the Data Highlights section of this report.

INTRODUCTION

This report contains a set of projections for Manitoba's Aboriginal populations. Registered Indians and Inuit have been grouped together as Status Indians for the projections in this report, due to the relatively low number of Inuit persons in Manitoba. In the 1991 Census, 900 persons identified themselves as Inuit (either single or multiple ethnic origin).

Projections of Canada's Aboriginal persons were done by Statistics Canada's Employment Equity Data Program (EEDP) by Province and Territory for the period 1991 - 2016. The base population (table on next page) for these projections was the 1991 Census, adjusted for net Census undercoverage and unenumerated Indian Reserves.

The Manitoba level populations in this report are the medium growth scenario from the Statistics Canada projections. The sub-provincial level projections were developed by the Manitoba Bureau of Statistics (MBS) in consultation with the Native Affairs Secretariat.

Note: The On Reserve/Off Reserve distribution for Registered Indians in the EEDP projections from Statistics Canada was not used. The EEDP projections have the 1991 On-Reserve proportion of the population at 64% for females and 69% for males. The projections in this report use the 1991 Census On-Reserve distribution of 54.3% for females and 60.8% for males.

Winnipeg and Other Off-Reserve distributions were also developed for the 3 Aboriginal groups. The Metis have a small On-Reserve population that is projected to increase over the projection period while the Non-Status and Other Indian group has a negligible On-Reserve population that has been held constant in these projections.

A description of the methodology used in these projections, including the assignment of the Aboriginal population to the Employment Equity groups can be found in the Appendix.

Also in the Appendix are the age distributions of the 3 Aboriginal groups over the 25 year projection periods for Manitoba, On Reserve, Winnipeg and Other Off Reserve.

Estimated Population of Manitobans with Aboriginal Origins

1991

	Status Indian (*)	Metis	Non-Status and Other Indians	Total
On Reserve	37,700 57.6%	500 1.2%	100 0.7%	38,200 31.7%
Winnipeg	15,900 24.3%	20,000 49.8%	9,100 60.7%	45,000 37.3%
Other Off Reserve	11,800 18.0%	19,800 49.3%	5,800 38.7%	37,400 31.0%
Total	65,400 54.2%	40,200 33.3%	15,000 12.4%	120,600 100.0%

* Includes Registered Indian (64,600) and Inuit (800).

DATA HIGHLIGHTS

This section describes the Manitoba Aboriginal population by Aboriginal group and location of residence for 1991. The Aboriginal population of 120,600 (based on the 1991 Census with adjustments for net census undercoverage and for unenumerated Indian Reserves) is presented in the table on the opposite page and in the chart below.

Manitobans with Aboriginal Origins Estimated Population - 1991

Data Source: Statistics Canada & Manitoba Bureau of Statistics

February, 1997

The Aboriginal group with the highest population during 1991, was Status Indians at 65,400. This represents 54.2% of Manitoba's Aboriginal population. Details on the Status Indian population are presented on pages 12, 13, 24-27.

The Metis had a population of 40,200 in 1991, representing 33.3% of Manitoba's Aboriginal population. Details on the Metis population are presented on pages 14, 15, 28-31.

Information on Manitoba's Non-Status Indian population, comprising 15,000 persons - 12.4% of Manitoba's Aboriginal population, is presented on pages 16, 17, 32-35.

The table on the following page shows a set of projected population totals for the 3 Manitoba Aboriginal groups until the year 2016. These projections were developed by the Statistics Canada Employment Equity Data program for Canada and each of the Provinces.

Manitobans with Aboriginal Origins Projected Population (1991 to 2016)

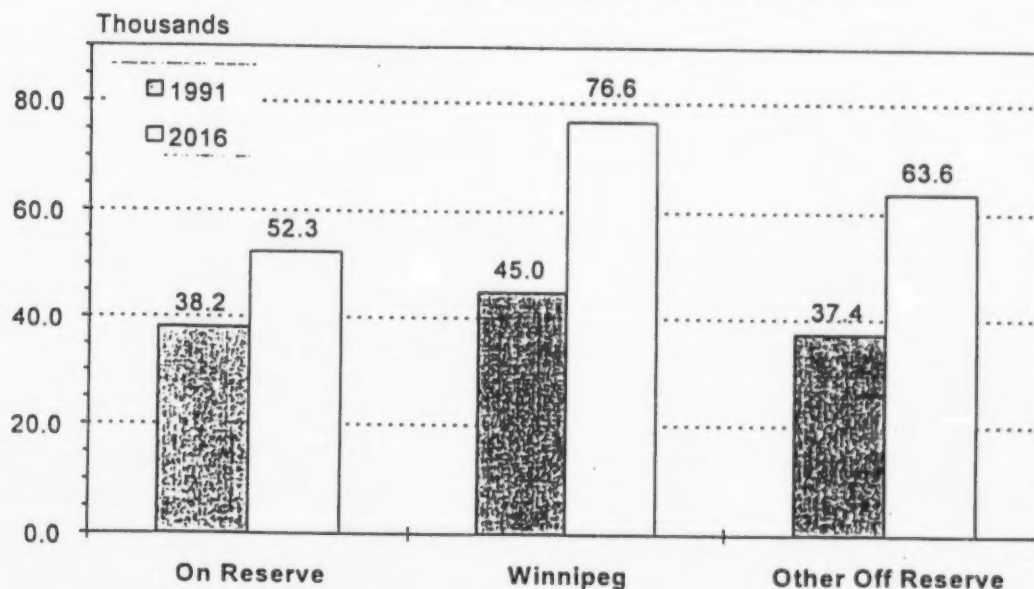

Data Source: Statistics Canada

February, 1997

On a geographic basis, the Province has been divided into 3 parts. The first part, "On Reserve" consists of Indian Reserves and Indian Settlements. The second part, "Winnipeg" includes the City of Winnipeg and the Rural Municipality of Headingley. The remainder of the Province becomes "Other Off Reserve".

Manitoba Total Aboriginal Population By Residence - 1991 and 2016

Data Source: Manitoba Bureau of Statistics

February, 1997

The 1991 geographic distribution for the 3 Aboriginal groups is presented in the table on page 4. As can be seen, the 3 Aboriginal groups had quite different residence patterns.

Over one-half (57.6%) of the Status Indian population were located On Reserve while another quarter (24.3%) of the population were to be found in Winnipeg during 1991.

Other than for a small On Reserve population in 1991, the Metis were almost equally split between Winnipeg and Other Off Reserve.

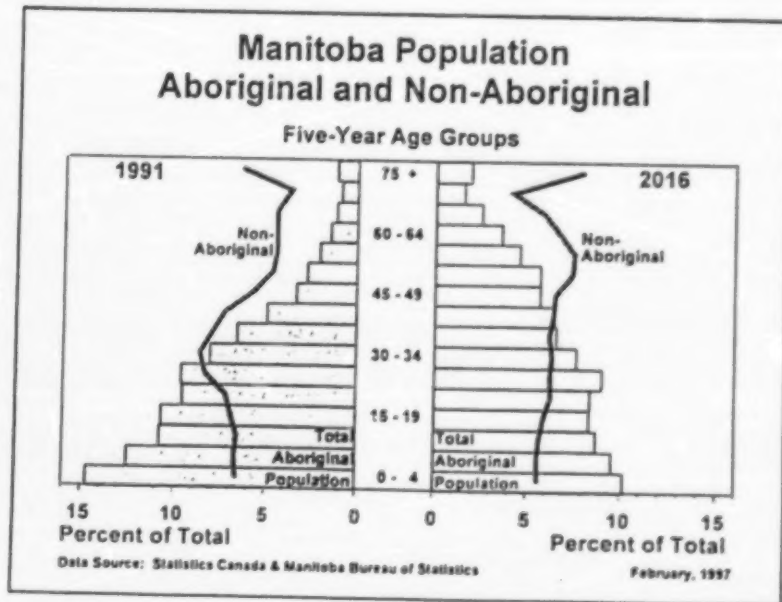

The Non Status and Other Indians were located predominantly in Winnipeg (60.7%) and Other Off Reserve with 38.7% of the 1991 population.

AGE DISTRIBUTION

This section describes the Manitoba Aboriginal age groups for each Aboriginal group and for all Aboriginals from 1991 through 2016. The age groups are divided into three areas: under 20 years, 20 to 64 years, and 65 years or more.

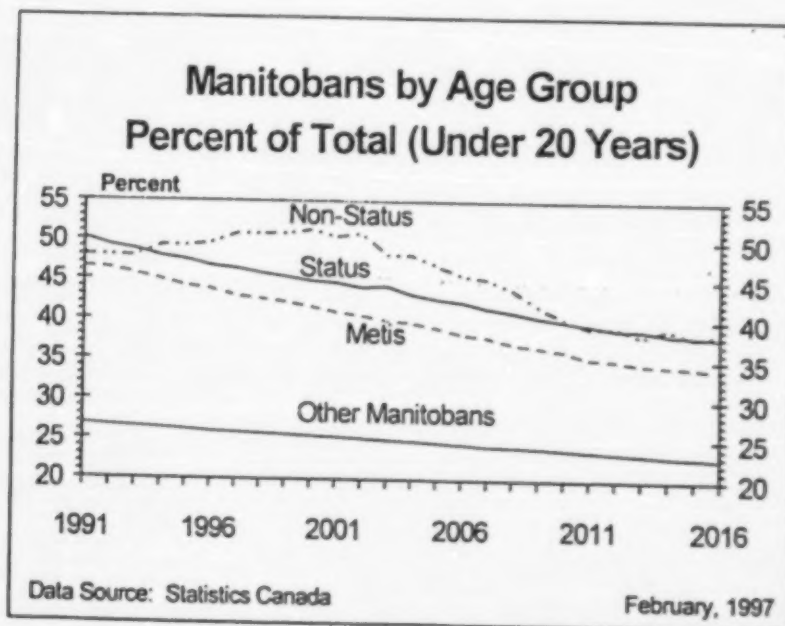

The Aboriginal population is much younger than the rest of Manitobans. In 1991, almost 15% of Aboriginals were under 5 years of age while for Non-Aboriginals the percentage was below 7%.

By 2016, the percentage of Aboriginals under 5 years will be over 10% while Non-Aboriginals will have only 5.5% under 5 years of age.

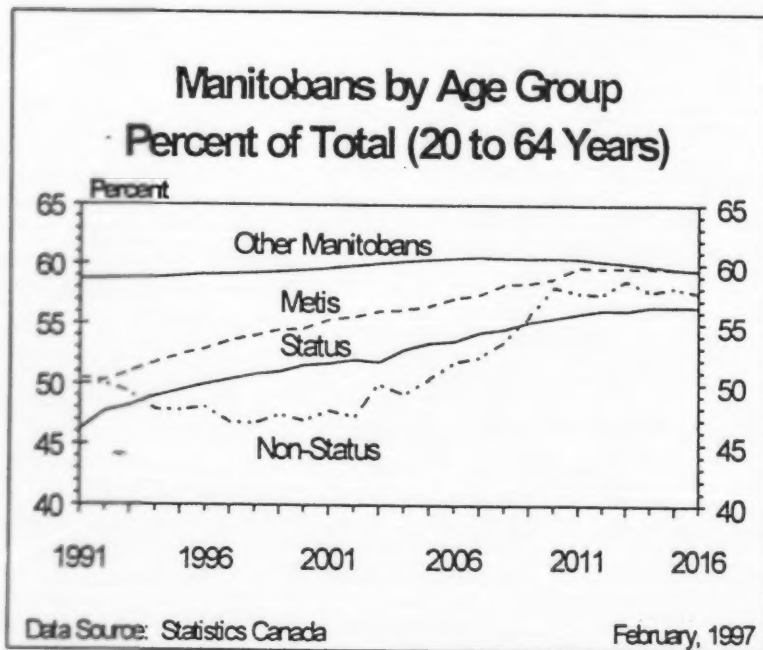

As of 1991, approximately 50% of Status Indians were under 20 years old, 48% for Non-Status, 45% for Metis and 27% for Other Manitobans.

By 2016, all percentages will be lower with Status Indians and Non-Status Indians at 38% each, Metis at 34% and Other Manitobans at 23% under 20 years of age.

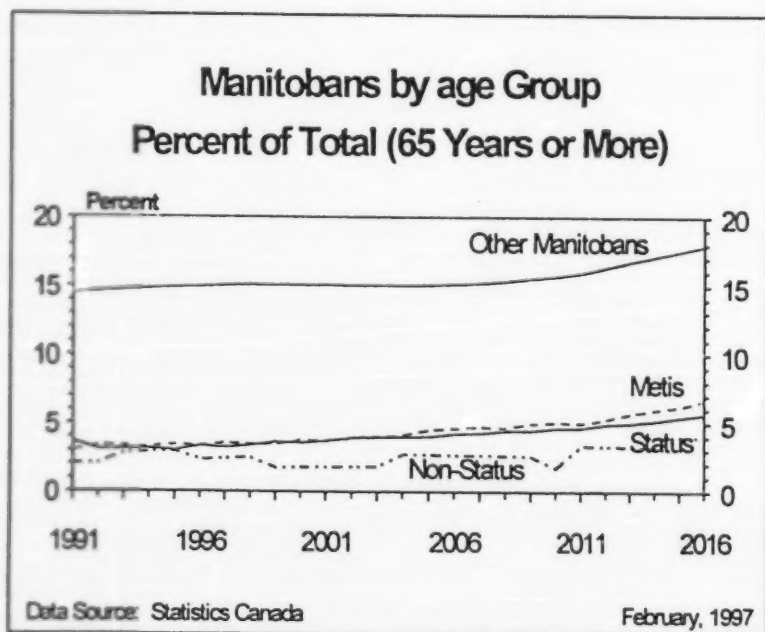

For the 20 to 64 years of age group during 1991, Other Manitobans had a higher percentage of people in this age group than did any of the 3 Aboriginal groups.

Almost 59% of Other Manitobans were 20 to 64 years old while only 50.5% of Metis, 50.0% of Non-Status and 46.2% of Status Indians were in this age group.

However by 2016, Other Manitobans will have slightly over 59% of their population in this age group to be matched by the Metis. Non-Status will reach almost 58% while Status Indians will have over 56% of their population 20 to 64 years of age.

While 14.5% of Other Manitobans were 65 years or more during 1991, fewer than 4% of Status Indians and even fewer Metis and Non-Status Indians were in this group.

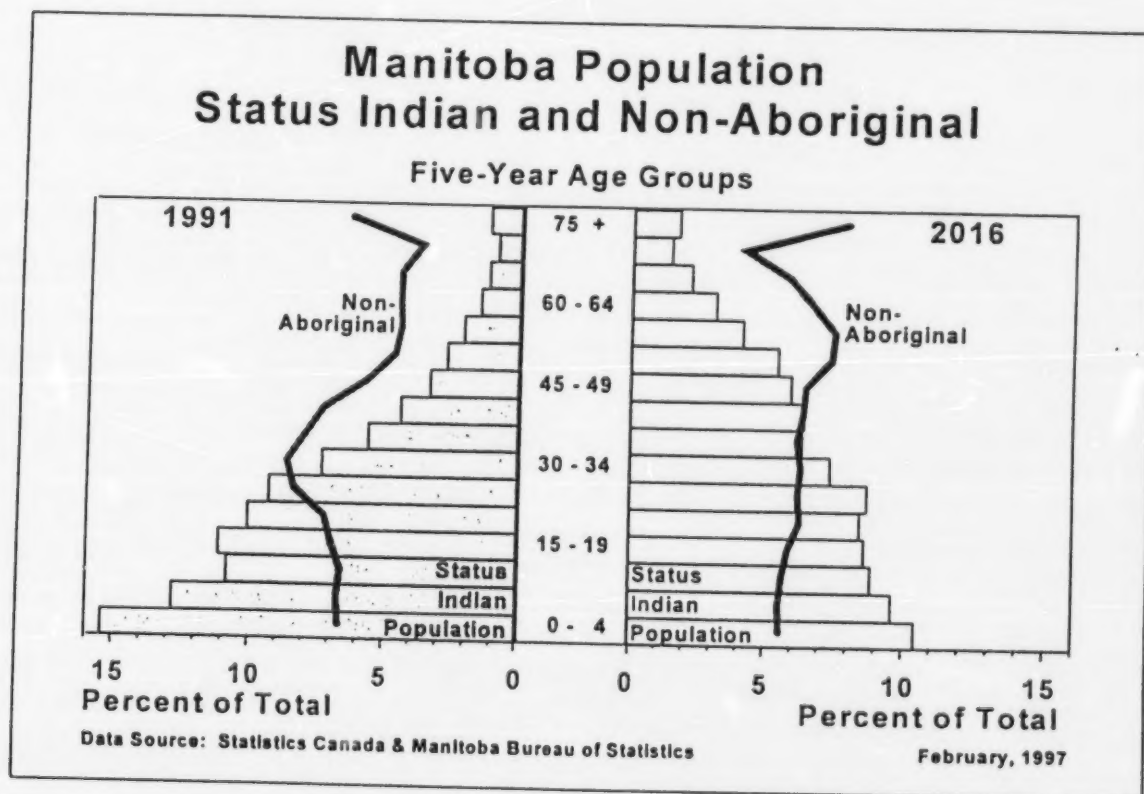

The percentage of Other Manitobans in this age group is projected to increase to 18% by 2016. The Aboriginal groups are also projected to increase their share of seniors but at a significantly lower rate, as shown on the graph on the left.

STATUS INDIAN

This section describes the demographic situation of the Status Indian (Registered Indian and Inuit) population.

This group, with total fertility rates¹ in 1991, of 3.00 for Registered Indians and 3.40 for Inuit is considerably younger than the rest of the Manitoba population. In 1991, 15.4% of the Status Indian population were under 5 years of age versus 6.6% for non-Aboriginal Manitobans. For the Status Indian population, over one-half (50.3%) were under 20 years of age. For non-Aboriginal Manitobans, only 26.8% were under 20 years of age in 1991.

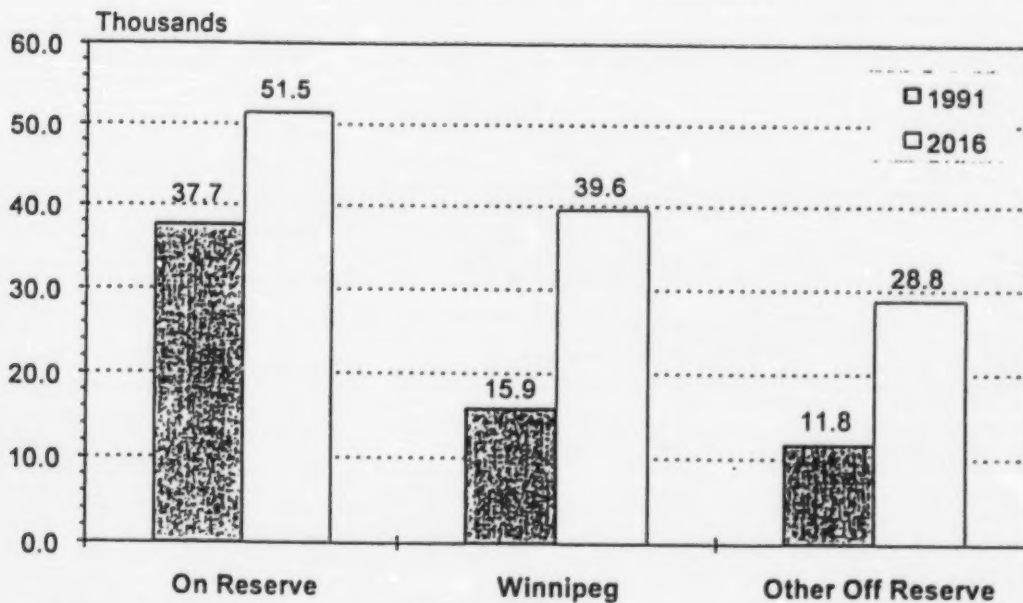

With total fertility rates projected to decrease (to 2.60 for Registered Indians and 2.80 for Inuit) by the year 2016, the Status Indian population will not be as young as at present but will remain considerably younger than other Manitobans. By the year 2016, the projected age distribution will be 10.5% under 5 years of age and 37.8% under 20 years. For the non-Aboriginal population, by 2016 the projected distribution will be 5.6% under 5 years and 22.7% under 20 years of age.

¹ The total fertility rate is the average number of live births to a woman during the ages 15 - 49 years.

At the older end of the age scale, the Status population has significantly fewer people over 65 years than the rest of the population. Although this segment of the Status Indian population is projected to triple over the projection period (from 2,200 to 6,600), it will still represent a small part of the population (increasing from 3.4% in 1991 to 5.5% by 2016). Meanwhile, the 65 years of age or better group of non-Aboriginal is projected to increase from 14.5% of the population to 17.9% by 2016.

Manitoba Status Indian Population By Residence - 1991 and 2016

Data Source: Manitoba Bureau of Statistics

February, 1997

On a geographic basis, in 1991 the Status Indian population was located On Reserve (37,700 - 57.6%), in Winnipeg (15,900 - 24.3%) and throughout the rest of the Province i.e. Other Off Reserve (11,800 - 18.0%). While the population is projected to grow in each area, most of the growth is projected to occur in the Other Off Reserve and Winnipeg areas.

The Other Off Reserve population is projected to more than double, to 28,800 representing 24.0% of the Status Indian population in 2016.

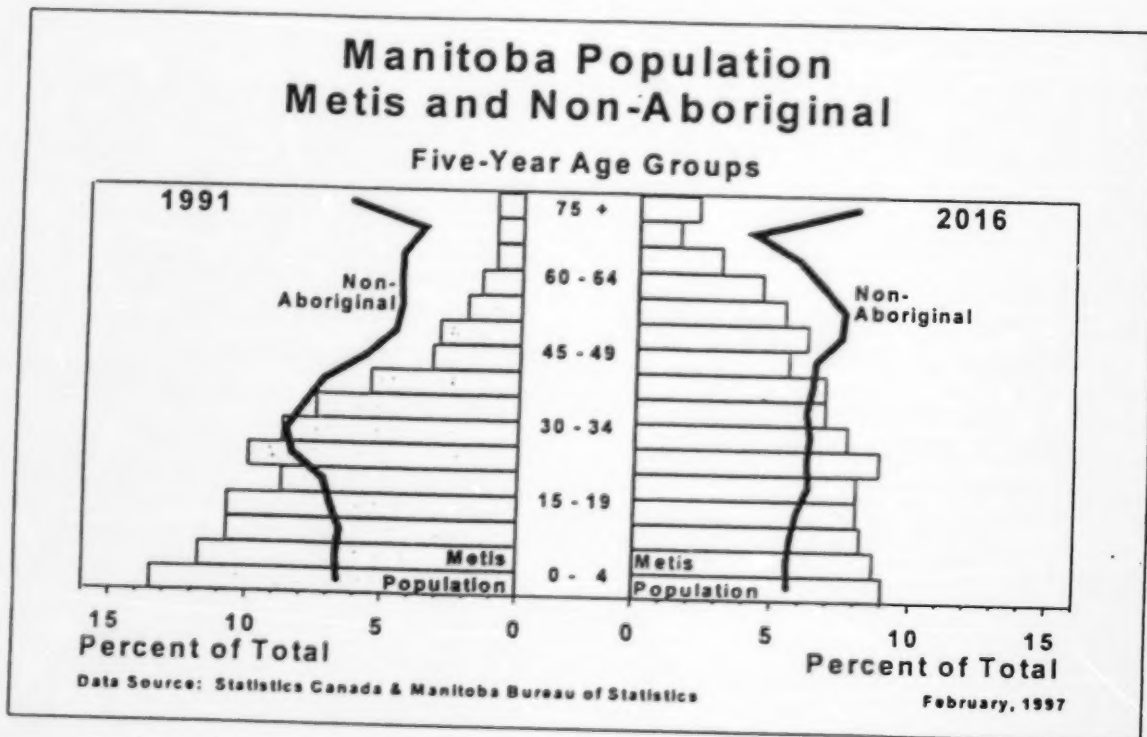

The Winnipeg population is also projected to more than double, to 39,600 or 33.0% of the population in 2016.

The On Reserve population, while only projected to grow by 36.6% to 51,500 will comprise 43.0% of the Status Indian population, down from 57.6% in 1991.

METIS

This section describes the demographic situation of the Metis over the 25 year projection period. In 1991, the Metis were the second largest of the 3 Aboriginal groups at 40,200 persons or one-third of Manitoba's Aboriginal population. By 2016, the number of Metis is projected to increase to 60,100 - 31.2% of the projected Aboriginal population. This figure represents a 49.5% increase over the 1991 population count.

The small decrease in share is mainly due to the Metis total fertility rate (2.50), which although higher than the rate for non-Aboriginal Manitobans (1.83) is lower than the fertility rate for Status Indians.

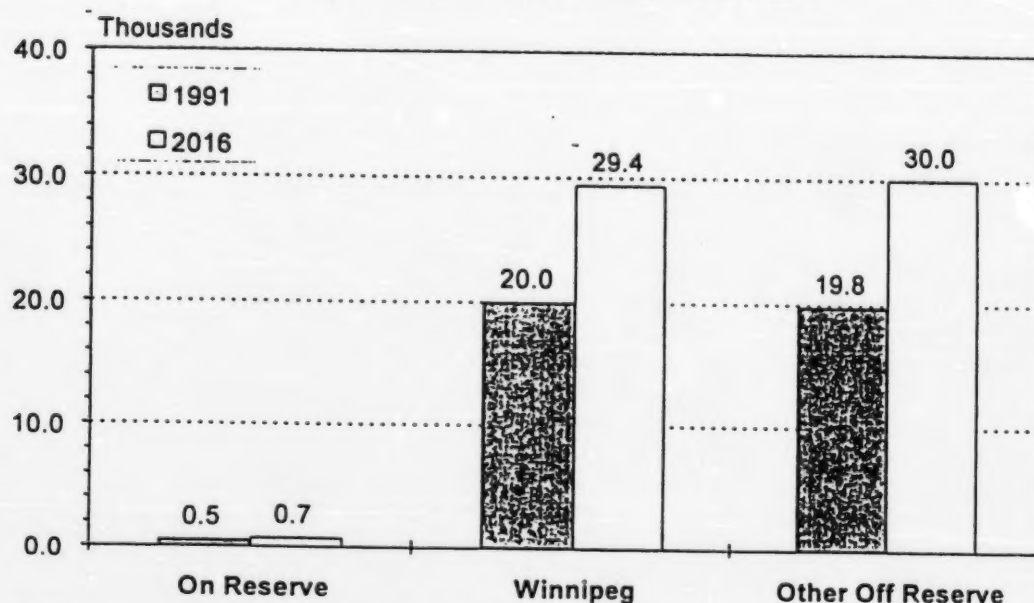

In 1991, 13.4% of the Metis were under 5 years of age. This percentage is projected to decline to 9.0% by 2016 even though the number of children in this age group will be 5,400, the same number as in 1991.

The under 20 years of age group which had 18,700 people (46.5% of the Metis) in 1991 is projected to increase to 20,300 by 2016 but the percentage will decrease to 33.8% as the population grows.

The senior population (aged 65 years and over) is projected to grow from 1,200 (3.0% of the Metis population) in 1991 to 4,000 (6.7% of the 2016 population).

For 1991, there was a small On Reserve population of 500 persons (1.2%), Winnipeg had 20,000 Metis (49.8%) while Other Off Reserve was home to 19,800 (49.3%) of the Metis population.

Manitoba Metis Population By Residence - 1991 and 2016

Data Source: Manitoba Bureau of Statistics

February, 1997

The largest increase is projected to occur in Other Off Reserve whose population will increase by 51.5% to total 30,000 persons, 49.9% of the Metis by 2016.

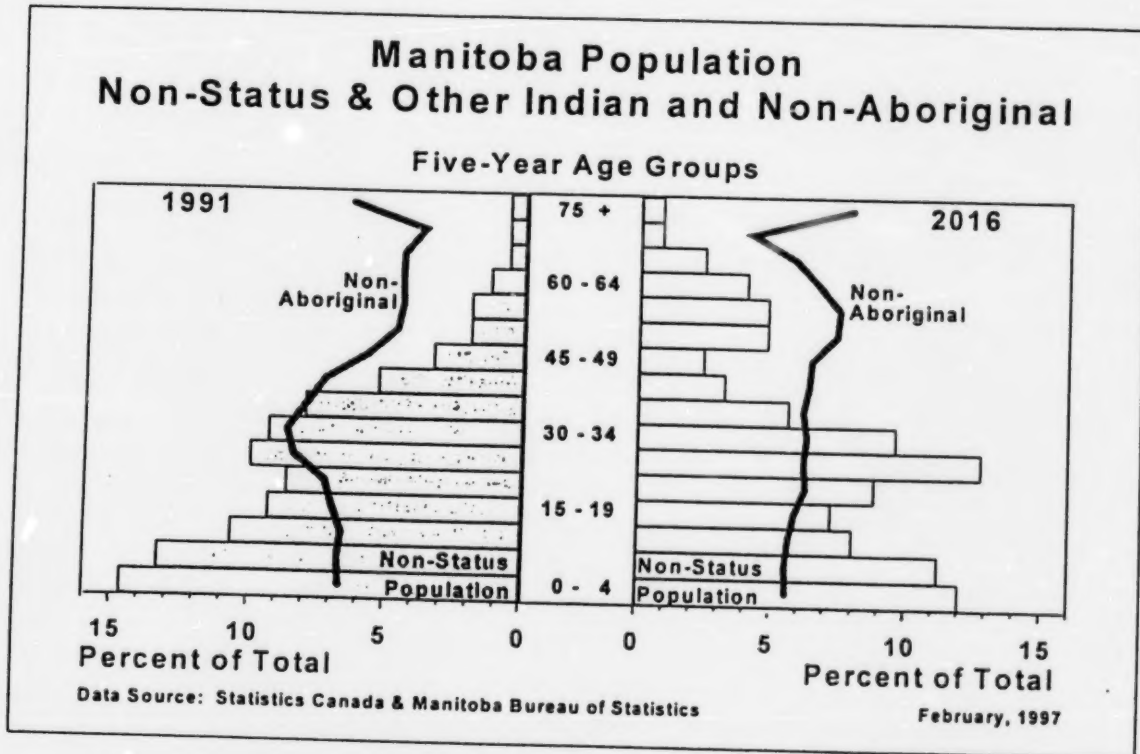

The Winnipeg population in 2016 is projected to have increased by 47.0%, to 29,400 from the 20,000 population count in 1991. The 29,400 persons represent 48.9% of the projected Metis population.

The small On Reserve population is projected to increase to 700 (1.2% of the Metis) by 2016.

NON-STATUS AND OTHER INDIANS

The Non-Status and Other Indians (N.S.O.) is the smallest of the 3 Aboriginal groups.

This group is the source of most of the Aboriginal population regaining status rights under Bill C31. The age structure of the "C31's" directly impacts the age structure of the N.S.O. group's age pyramid.

As can be seen on the opposite page, the 1991 age pyramid of the N.S.O. show a young population. However for 2016, the teen and early adult age groups have been reduced. These people appear to be the children of the people who have regained status under Bill C31.

The N.S.O. population is projected to decrease in the short term, from 15,000 in 1991, declining to 11,000 by 2002 before increasing to 12,500 by the end of the 25 year projection period.

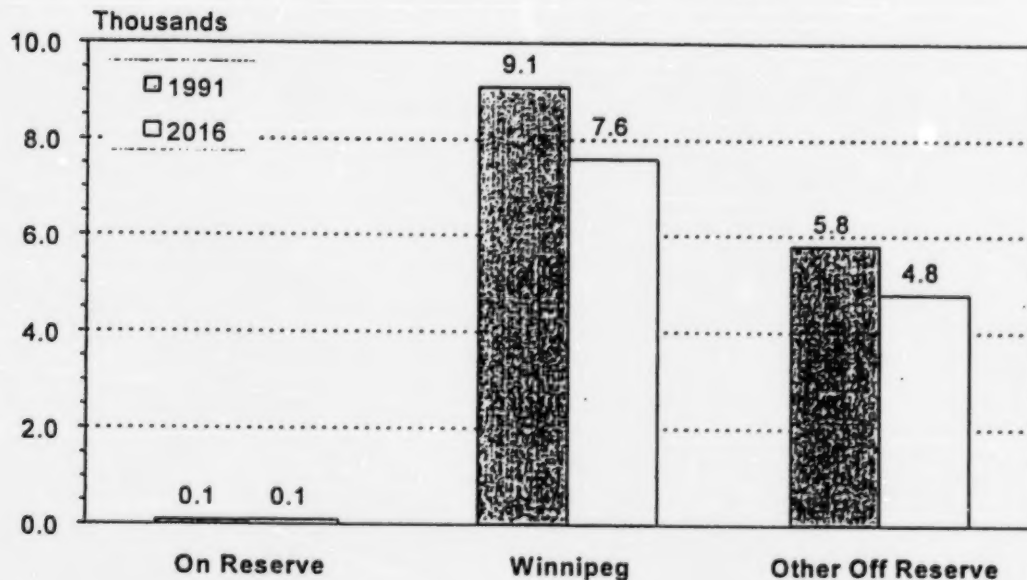

The decrease of 2,500 persons between 1991 and 2016 represents 16.7% of the starting year population.

The under 5 years age category, with a population of 2,200 in 1991 contains 14.7% of the N.S.O. population. By 2016, this age group will have decreased to 1,500 (12.0% of N.S.O.).

The under 20 years of age group, with 7,200 or 48.0% of the 1991 population is projected to drop to 4,800 (38.4% of the 2016 population).

There will be a small increase in the senior population (65 years of age and over), growing from 300 (2.0% of the population) to 500 (4.0%) by 2016.

Manitoba Non-Status & Other Indian Population By Residence - 1991 and 2016

Data Source: Manitoba Bureau of Statistics

February, 1997

The On reserve population for this group is held constant at 100 for the 25 year period.

The Winnipeg total for N.S.O. was 9,100 in 1991 and is projected to decrease to 6,700 by 2002 before increasing to 7,600 by 2016.

During the same time period, the Other Off Reserve population is projected to move from 5,800 down to 4,300 before rebounding to 4,800.

Total Fertility Rates Manitoba and Canada

Data Source: Statistics Canada & Manitoba Bureau of Statistics

February, 1997

METHODOLOGY

The 1991 Census enumerated 116,200 Manitobans who indicated at least one Aboriginal origin (Inuit, Metis or North American Indian) in response to Question 15, and/or indicated that they were Registered Indians in reply to Question 16. Additions to the population for unenumerated Indian Reserves and net census undercoverage raised the base population to 120,600.

For the purpose of these projections, persons who (1) indicated that they were Registered Indian and had an Aboriginal ancestry, or (2) declared more than one Aboriginal ancestry, were allocated to only one category in the following order: (1) Registered Indian, (2) Inuit, (3) Metis, (4) Non-Status and Other Indians. Thus,

- (1) a person who declared being a Registered Indian was categorized as such, irrespective of his/her Aboriginal ancestry;
- (2) a non-Registered Indian who indicated an Inuit ancestry was categorized as Inuit, irrespective of other Aboriginal ancestry;
- (3) a non-Registered Indian and non-Inuit individual who indicated a Metis ancestry was categorized as Metis;
- (4) the Non-Status and Other Indian category is the residual category and includes individuals who are not registered and whose only Aboriginal ancestry is North American Indian.

The above is excerpted from Statistics Canada 91-5390 XPE.

The 1991 base population was then projected forward using a cohort component approach with the following assumptions for Manitoba:

		<u>Registered Indian</u>	<u>Inuit</u>	<u>Metis</u>	<u>Non-Status & Other Indian</u>
Total Fertility Rate	1991	3.00	3.40	2.50	2.50
	2016	2.60	2.80	2.30	2.30
Life Expectancy at birth (years)					
1991	Female	74.0	74.0	77.4	77.4
	Male	66.9	66.9	70.5	70.5
2016	Female	80.1	80.1	82.6	82.6
	Male	72.9	72.9	76.0	76.0

(continued)

	<u>Registered Indian</u>	<u>Inuit</u>	<u>Metis</u>	<u>Non-Status & Other Indian</u>
C31 conversions 25 year total	8,800		-600	-8,200

The Manitoba level projected populations were then allocated to 3 areas of the province (On-Reserve, Winnipeg and Other Off-Reserve) by the Manitoba Bureau of Statistics using a ratio approach.

For Status Indians, the projected distribution is:

	<u>On-Reserve</u>		<u>Winnipeg</u>		<u>Other Off-Reserve</u>	
	<u>Female</u>	<u>Male</u>	<u>Female</u>	<u>Male</u>	<u>Female</u>	<u>Male</u>
1991	54.5%	60.8%	26.4%	22.2%	19.1%	17.0%
1992	53.9	60.2	26.7	22.6	19.4	17.2
1993	53.3	59.6	27.1	22.9	19.6	17.5
↓	↓	↓	↓	↓	↓	↓
2016	40.0%	46.0%	35.0%	31.0%	25.0%	23.0%

The 1991 age distribution (by sex and geographic area) was used to distribute the total projected population by sex and age group for each area. The sex and age group populations were then pro-rated to match the Manitoba published totals.

The 1991 percentages are from the 1991 Census. The 2016 On-reserve percentages are calculated under the assumption that the proportional shift from Indian Reserves between 1971 and 1991 will be repeated over the projection period. This shift from Indian Reserves will be shared between Winnipeg and Other Off-Reserve areas according to their 1991 population shares.

As the On-Reserve populations for Metis and Non-Status are small, a different methodology was used for these groups. For these populations, each age group was projected by geographic area using the 1991 distribution, as shown in the table on the opposite page.

For example during 1991, 48.1% of 45-49 year old Metis females were in Winnipeg while 51.4% were living in Other Off-Reserve. Therefore, these percentages were held constant and applied to the projected number of Metis females 45-49 years of age.
